

KFKA is one of the few "Mom & Pop" News stations in Colorado. We are a stand alone operation that depends on local ad revenue and quality programming. Nearly 3/4 of our programming is provided by networks that are already using delays. We also have a delay installed for our local programming, to date it has never been needed. Our programming is conservative and "smut talk" would not go far with our audience. It seems unnecessary to make hundreds of stations keep tabs on a handful of satellite hosts and their programs. Since almost all of our programs are a minimum of 3 hours we would be required to purchase long form audio capture and compression systems, a requirement that would certainly hurt us financially. As a responsible operator and owner, my staff and I are extremely careful about the content that is aired on KFKA and we have invested in the proper equipment to filter anything that might be questionable. According to our files, KFKA has served the Northern Colorado community for over 83 years without an incident, it's sad to think that we would be punished with more rules and regulations while having a clean track record of that length. The burden of proof should be on the accuser if accusations are going to be made. "Innocent until PROVEN guilty".
